

Sanmar Engineering Technologies Limited

Sanmar Engineering Technologies Limited (SETL) is a well-integrated, synergistic group of engineering companies and foundries in India and Mexico.

SETL had its beginnings in 1976 as part of the import substitution efforts by The Sanmar Group to offer indigenously manufactured critical products for a wide range of process plants, contributing significantly to enhanced industrial efficiency and process safety. The range includes mechanical seals, rupture disks, explosion vents, safety heads, sleeved plug valves, lined plug valves, high performance butterfly valves, safety relief valves, cast, steel, gate, globe and check valves.

SETL's in-house foundry acts as a reliable supplier of castings in line with the Group's constant focus on backward integration, while its services-and-maintenance outfit is yet another logical extension of its philosophy of integration - in this case, forward.

Products Division

The Sanmar Group has an abiding belief in the philosophy of entering into and sustaining joint ventures with world leaders. Acquiring, assimilating and applying technology appropriate to the critical needs of the end-user, has enabled Sanmar Engineering Technologies to develop as India's leading process control equipment manufacturer.

These qualities also mean that the division is able to provide prompt and cost-effective solutions to all its

JV partners, besides ensuring customer delight among more than two thousand domestic clients in the hydrocarbon, chemical and energy sectors.

The products and systems find application in plant safety, fluid control and energy saving devices. The increasing accent at Sanmar Engineering on adherence to stringent quality specifications, efficient work processes, cost control and constantly meeting customer expectations on delivery, gives it a globally competitive edge.

Steel Castings Division

The Steel Castings Division business comprises Sanmar Foundries in Viralimalai, Trichy, India and Matrix Metals in Mexico.

The division began by providing cost competitive foundry services to its joint venture partners. It benefits from the global reach and long standing relationships that the Group enjoys with its joint venture partners.

The steel foundry expanded to include the rail-road and off-the-road vehicle segments of the transportation industry. Scaling up from captive consumption to newer segments, the state-of-the-art, fully automated steel foundry today has an Investment Foundry and a Sand Foundry and renders machining services to its domestic and global customers.

The foundries provide a wide range of castings, machining and tooling services to its global customers in industry segments such as Valves, Oil-Field, Construction, Mining, Railroad and Transportation.
